

# HIGHLIGHTING NEW SERVICES: UAV'S NOW PART OF OUR FLEET

The emerging technology in Unmanned Aerial Vehicles, is not just impressive it allows us to provide an affordable and fresh approach to mapping and imagery for our clients. We work closely with our supplier to make sure we provide our clients with the most up to date and economical solutions while adhering to Transport Canada's regulations and safety protocol. We have access to a wide variety of equipment depending on the project you are undertaking and whether it's video or photographs you require. While there are many UAV applications, as long as regulations are followed, the benefits of using them to reduce costs, safety risks, and increased documentation are unsurmountable. Give us your idea and will work with you to get it done!

**Special Flight  
Operations  
Certificate (SFOC)  
Approved by  
Transport Canada**

**Countless  
Applications**

**Saves time and  
Reduces Safety  
Risks**
