

# UPDATING SERVICES: ONE CALL MANAGEMENT

First Alert Locating Ltd. has been managing and screening one call locates for numerous clients since 2001. With the introduction of Bill S-229 by Senator Grant Mitchell, we will all be part of prevention of damages and improved safety for underground infrastructure. Many changes will be inevitable; the requirement for operators to register with a notification center, mandatory One Call placement, mandatory requirement for locates, and

much more. Our One Call Management squad eliminates the guesswork, reduces client risk and ensures regulatory compliance.

The advancements in software for One Call Management helps take the hassle out of the one call ticket management. It allows us to reduce administrative burden and compliments our services ensuring all of your one call tickets are properly administrated, approved, verified, issued, tracked, reported and archived. This process is not just impressive it allows us to provide an affordable and simple approach to protecting our clients' underground facilities and providing appropriate and timely communication with the ground disturber to complete their work safely. Our screening costs are **FREE** and cost sharing with our other clients reduces your overall costs for locates. We can handle the one call screening and locating from start to finish or just manage the locates as you see fit. We are flexible and can set up your one call management in any way to compliment or assist you in your operations. Talk to us today, even if it's just a question on how the one call system works!
